

WEEK 1: Requirement Analysis and Customer Database Module

- S.KAVIYA (E25AI119)

1.Requirement Analysis

Understanding Art Work Shop Business:

An Art Work Shop system manages the end-to-end process of browsing, purchasing, and managing artworks and art supplies online. It also allows customers to book art workshops. Below is a structured breakdown of the business process, customer data requirements, and entity definitions for system design and database modeling.

The Process Flow

- ❖ **Browse / Search Artwork:** The customer searches for the artwork or art supplies they want to purchase.
- ❖ **Add to Cart:** After selecting the required products, the customer adds them to the cart.
- ❖ **Order Placed:** The customer selects the delivery address and places the order.
- ❖ **Checkout / Payment:** After placing the order, the customer proceeds to checkout and payment.
- ❖ **Delivery:** After payment confirmation, the order is processed and the products are delivered to the customer.
- ❖ **Review & Support:** After successful delivery, the customer can provide a review and request support for returns or replacements, if applicable.
- ❖ **Workshop Booking:** Customers can view available art workshops and book suitable sessions.

Entites:

ENTITY	DESCRIPTION	KEY ATTRIBUTES	KEY RELATIONSHIPS
Customer	End -user who purchases artworks and books workshops.	Customer_id(PK),customer_name Phone,email address, password	One- to -many with order,booking
Product	Artwork or art supply listed for sale on the platform.	Product_id (PK), seller_id (FK), title, description, price, stock_quantity, category	Many-to-One with Seller, One-to-Many with Review
Workshop	Art classes or sessions available for customers to book.	Workshop_id (PK), workshop_name, date, time, duration, fee	One-to-Many with Booking
Booking	Record of a customer's workshop reservation.	Booking_id (PK), customer_id (FK), workshop_id (FK), booking_date, booking_status	Many-to-One with Customer, Many-to-One with Workshop
Order	Transaction representing a customer's artwork purchase.	Order_id (PK), customer_id (FK), artwork_id (FK), order_date, quantity, total_amount, order_status	Many-to-One with Customer, Many-to-One with Artwork, One-to-One with Payment
Payment	Monetary transaction associated with an order.	payment_id (PK), order_id (FK), payment_method, payment_date, amount, payment_status	One-to-One with Order
Review	Feedback and rating submitted by a customer for a product.	review_id (PK), customer_id (FK), product_id (FK), rating, comment, created_at	Many-to-One with Customer, Many-to-One with Product Ippo Mam oda format same ah irukku.

Customer table creation:

```
SQL> create table customer(customer_id varchar2(20) Primary key, first_name varchar2(20),last_name varchar2(20),email varchar2(30),phone number(10),created_at date);
```

```
Table created.
```

```
SQL> desc customer
```

Name	Null?	Type
CUSTOMER_ID	NOT NULL	VARCHAR2(20)
FIRST_NAME		VARCHAR2(20)
LAST_NAME		VARCHAR2(20)
EMAIL		VARCHAR2(30)
PHONE		NUMBER(10)
CREATED_AT		DATE

Inserting values:

```
SQL> INSERT INTO customer
2 VALUES ('C-1001','Beema','ponting','beema200@edss.com',9234567856, TO_DATE('2023-02-14','YYYY-MM-DD'));
```

```
1 row created.
```

```
SQL> INSERT INTO customer (customer_id, first_name, last_name, email, phone, created_at)
2 VALUES (
3     '&cust_id',
4     '&first_name',
5     '&last_name',
6     '&email',
7     &phone_num,
8     DATE '&created_date'
9 );
```

```
Enter value for cust_id: C-1002
```

```
old 3: '&cust_id',
```

```
new 3: 'C-1002',
```

```
Enter value for first_name: priya
```

```
old 4: '&first_name',
```

```
new 4: 'priya',
```

```
Enter value for last_name: sakthi
```

```
old 5: '&last_name',
```

```
new 5: 'sakthi',
```

```
Enter value for email: priyasakthi@edss.com
```

```
old 6: '&email',
```

```
new 6: 'priyasakthi@edss.com',
```

```
Enter value for phone_num: 9856734456
```

```
old 7: &phone_num,
```

```
new 7: 9856734456,
```

```
Enter value for created_date: 2024-09-23
```

```
old 8: DATE '&created_date'
```

```
new 8: DATE '2024-09-23'
```

```
1 row created.
```

```
SQL> select * from customer
2 ;
```

CUSTOMER_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE	CREATED_A
C-1001	Beema	ponting	beema200@edss.com	9234567856	14-FEB-23
C-1002	priya	sakthi	priyasakthi@edss.com	9856734456	23-SEP-24
C-1003	Arun	kumar	arun200@edss.com	9876543212	15-OCT-24

CUSTOMER_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE	CREATED_A
C-1004	Anu	Priya	anupriya200@edss.com	8765943256	23-MAY-25
C-1005	Reena	das	reenadas200@edss.com	9087654567	30-APR-22

Update:

```
SQL> update customer set email = 'reenaarjun@edss.com' where customer_id = 'C-1005';
1 row updated.
```
